SAVE UP TO 30%* ON YOUR HEATING COSTS!

Lower heating bills, higher comfort levels with the new terrier i-temp programmable radiator controls!

* Energy savings are based on comparison trials of identical dwellings, one fitted with standard TRVs and the other fitted with terrier i-temp PRCs. To achieve the best results you should increase the number of PRCs per dwelling and use them in an efficient manner.

Why heat the whole house when you can just heat the rooms that you need?

The **terrier i-temp** is a Programmable Radiator Control (PRC). It is an upgrade for existing thermostatic radiator valves and gives you time and temperature control of each radiator. Heating the whole house when you don't need to could cost you hundreds of pounds on wasted fuel every year – money that you could save with the **terrier i-temp**.

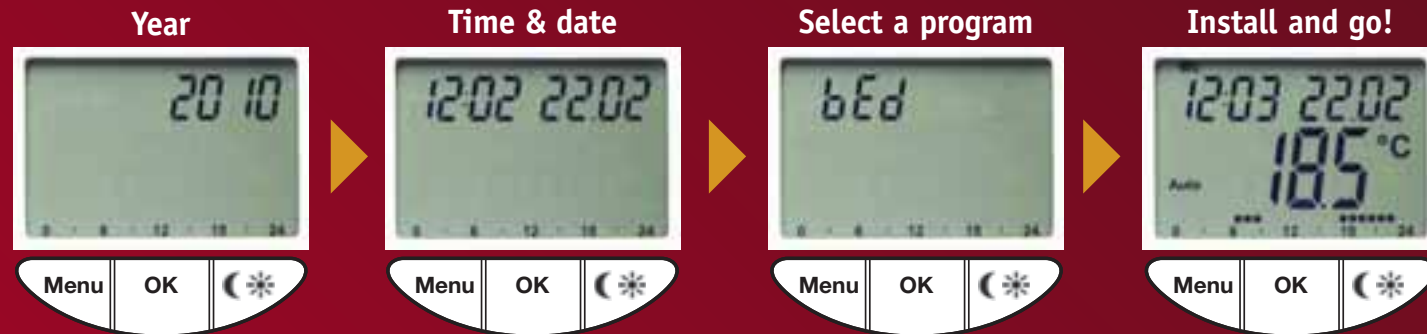

The **terrier i-temp** is a simple upgrade to your heating system – you don't need to change your master programmer which will continue to control the overall heating times for the whole house. **terrier i-temp** brings an extra element of control, allowing you to fine-tune your heating room-by-room.

Features:

- Programme each radiator individually to match the needs of the room
- Up to 6 temperature settings per 24 hours, 7 days a week
- Built-in lifestyle program options for living rooms and bedrooms
- Easy to set up – plug and play!
- Upgrade thermostatic radiator valve bodies in minutes
- Compatible with most thermostatic radiator valves
- Complete with valve body option for new installations
- Turns the radiator thermostats up or down automatically

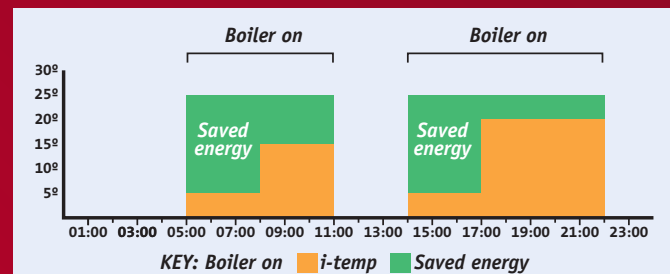

Easy to programme...

...and easy to install!

Energy saved in a typical sitting room

The chart above illustrates the typical energy savings when using the **terrier i-temp** in comparison with a standard TRV. The orange area represents the **terrier i-temp** program with the green indicating the potential energy savings.

Vertical and horizontal PRC. Also available with valve bodies
